Ayush Soni

+91 9644963410 | Pune, India | Senior Full Stack AI Engineer | ayushsoni1010.work@gmail.com
linkedin.com/in/ayushsoni1010 | github.com/ayushsoni1010 | x.com/ayushsoni1010 | ayushsoni1010.com

Summary

Full stack AI engineer with 5+ years of building products from the first commit, at five startups and now at Accenture. Strongest where AI meets product: agent workflows and MCP integrations in Python and TypeScript, the AWS infrastructure underneath, and frontends built with a designer's eye. A former DevRel engineer who has taught 5,000+ developers, so clear docs and mentoring come naturally.

Technical Skills

Languages:	Python, TypeScript, JavaScript, SQL
GenAI & LLMs:	AI Agents, MCP, Agentic Workflows, RAG, LangChain, LangGraph, vLLM, LiteLLM, MLflow
Backend:	FastAPI, Pydantic, Node.js, Express, tRPC, REST APIs, SSE, WebSockets, WebRTC
Frontend:	React, Next.js, Vue, Nuxt.js, Angular, Svelte, Stencil.js, Redux, Zustand, TailwindCSS
Databases:	PostgreSQL, MongoDB, MySQL, Redis, pgvector, Prisma, Drizzle
Cloud & DevOps:	AWS (EKS, ECR, IAM, Athena, Glue, S3, EC2), Docker, Kubernetes, GitLab CI, GitHub Actions
Tooling & Testing:	Nx, Vite, Webpack, Vitest, Jest, Playwright, Storybook, JFrog, Figma, Swagger, Postman

Experience

Accenture | Client: Swisscom — Pune, India (Hybrid)
Senior Software Engineer – Full-time — *Mar 2026 – Present*

- Built a production Airbyte source connector for AWS Athena with the Python CDK, supporting full-refresh, incremental timestamp-cursor, and incremental ID-cursor sync modes with Pydantic type mapping.
- Provisioned the full AWS data pipeline from scratch — from S3 and Glue crawlers to Athena and Airbyte on EKS with ECR and EBS. Moved the deployment off EC2 to EKS after tracing failures to Airbyte's port and networking needs.
- Led the ODP Design System from 0 → 1: 22 Stencil.js components in an Nx monorepo that auto-generate React, Vue, and Angular packages with zero hand-maintained glue code, now live in the ODP Console.
- Engineered a three-layer test strategy (unit, Playwright visual regression, per-framework integration) and a GitLab CI pipeline for lint, typecheck, test, build, and semver publish to JFrog Artifactory.
- Added CLAUDE.md, AGENTS.md, MCP config, and agent skills to the monorepo so Claude Code, Cursor, and Gemini follow project conventions out of the box.

Attentions AI — Pune, India (Onsite)
Software Development Engineer – Full-time — *Oct 2024 – Feb 2026*

- Led frontend architecture across 4 production micro-frontends (Artigen, Connect, Docu, Lumina) for document Q&A, call-center intelligence, and e-commerce, owning shared state, routing, and component contracts.
- Built the AI agent layer with MCP connectors for multi-tool orchestration, wiring model-driven workflows to internal services so agents can take actions across products.
- Wrote a custom markdown/LaTeX parser in TypeScript for math-heavy streaming chat, replacing off-the-shelf parsers that broke on nested math and partial tokens. Chat module performance improved by 60%.
- Designed a multi-tenant RBAC system spanning organization, department, team, and user roles, enforcing data isolation and role-scoped sharing across every tenant.

Go2work — Houston, Texas, United States (Remote)
Frontend Engineer – Full-time — *Nov 2023 – Oct 2024*

- Built the hiring platform dashboard from scratch in TypeScript/Next.js and architected a reusable Shadcn UI component library that became the app's design foundation.
- Improved app performance by 70% with refactoring and UI fixes, and used chaos engineering to catch failures early.
- Delivered real-time WebSocket chat, push notifications, and Firebase auth for live recruiter–candidate workflows.

FifthTry (YC W21) Bengaluru, India (Remote)
Developer Relations Engineer – Full-time *Apr 2023 – Sep 2023*

- Contributed to Rust-based core development of the fastn framework and built 10+ reference applications plus a full documentation platform to drive adoption.
- Ran workshops for 5,000+ developers and organized 12+ nationwide events, growing the community by 300%.

Magic Delhi, India (Remote)
Product Engineer – Contract *Jan 2023 – Mar 2023*

- Joined as the second engineer on a Slack-native SaaS dashboard for 10+ communities that cut platform switching by 60%, building auth, password recovery, and sitemaps in NuxtJS and Parse Server.
- Shipped the community events module and added LogRocket session tracking, cutting bug resolution time by 60%.

Economize Bengaluru, India (Remote)
Software Engineer *Oct 2021 – Nov 2022*

- Built the AWS and GCP cost report views for a cloud cost optimization platform used by 500+ enterprise clients, with one Chart.js wrapper behind every chart type in the Vue.js app.
- Created a 15+ component Vue library documented in Storybook, speeding up team development by 30%, and rebuilt the docs site on Ghost, improving its UX by 40%.
- Integrated Auth0 and Pabbly Connect, fixed GCP backend bugs, and revamped the site in Handlebars and Gulp.

Projects

vLLMOps *Python, vLLM, LiteLLM, LangChain, MLflow, Docker* github.com/ayushsoni1010/vllmops

- Self-hosted LLM serving stack with vLLM on GPU behind a LiteLLM gateway and nginx, adding virtual API keys, per-key budgets, Redis rate limiting, and exact-match plus semantic caching.
- The gateway retries vLLM three times, then falls back to Ollama and OpenAI. Prometheus, Grafana, and 7 alert rules track KV-cache pressure, queue depth, error rate, and P95 latency.
- Built a Python CLI that streams through LangChain and logs TTFT, tokens per second, cost, and human feedback to MLflow, plus a YAML-driven pytest eval suite that gates quality and latency.

Frame AI *Next.js, tRPC, Prisma, Supabase, Inngest, E2B, AI Agents* github.com/useframe/frontend

- AI code-generation platform where agents turn natural-language prompts into production-ready Next.js apps, with Inngest for durable async orchestration and E2B sandboxes for isolated execution with live preview.
- Built a type-safe tRPC and Prisma API, real-time chat via TanStack Query, and a syntax-highlighted file explorer.

Education

MediCaps University Indore, Madhya Pradesh, India
Bachelor of Technology in Computer Science and Engineering *CGPA: 8.7/10*

Certifications

Claude Certified Architect – Foundations, Anthropic *Apr 2026*

Awards, Community & Volunteer Experience

- **Mentor** at AnyoneCanCo.de, HackTheNorth, Script Winter of Code, and GDSC Medicaps, guiding developers and designers through hackathons and open-source programs.
- **Microsoft Learn Student Ambassador** running hands-on sessions on Git, GitHub, and web frontend engineering.
- **Hackathon Winner** at HackThisFall (Most Creative Use of Twilio), plus NFTs and bounties won at ETHIndia'23.
